- ◆ DHL Global Mail Priority
- ◆ DHL Global Mail Standard

Ongoing carrier compliance is one of Varsity's top priorities. Varsity works directly with customers and carriers to ensure the most timely rate updates and critical compliance changes to labels, manifests, service types, and value-added services.

Varsity's DHL shipping applications are designed to support all DHL shipping requirements. DHL features and functionality include compliance with rating and routing data and specialized functions such as delivery confirmation, dimensional weight, and export reason codes. All billing methods are supported including third party billing and COD.

DHL Carrier Compliance Kit (CCK)

The DHL CCK enables full shipment capabilities for all DHL small parcel shipments. The kit includes compliant rating, routing, and labeling data for all locations served by DHL.

The CCK contains all rate, ZIP Code™, and zone data for shipments within any of the locations served by DHL. DHL shipping rules and restrictions are immediately applied to ensure full shipping compliance and timely delivery of packages. Specialized labels are generated, as well as a pickup summary barcode label, high value reports, and paper manifests. Electronic manifests can be generated for direct upload to the DHL host.

Additional features include electronic COD and call tags, delivery confirmation, automatic consolidation, and hundredweight rating. All additional charges supported by DHL are maintained and are applied to shipping costs whenever required.

The DHL CCK also supports the mixed service types behind the delivery of residential DHL@home packages. DHL@home labels contain shipping information for DHL's delivery segment, as well as final mile delivery details for USPS. The kit includes USPS barcodes, tracking numbers, routing codes, and delivery confirmation.

DHL shipping rules and restrictions are immediately applied to ensure full shipping compliance and timely delivery of packages. With Varsity's optional Export Documentation module, it is possible to automatically generate the required export documents based on shipping requirements and compliance rules. Documents available include Canadian Customs Invoice, Certificate of Origin (NAFTA and Standard), Commercial Invoice, and Shipper's Export Declaration.

Specialized thermal air waybills are generated, as well as all required shipping labels. Detail and summary manifests reports may be printed or uploaded electronically via FTP to DHL's server.

The DHL CCK also includes automatic consolidation and hundredweight rating. Additional charges such as Delivery Duty Paid, insurance, and dimensional weight are maintained and applied to shipping costs whenever required.

Additional Zone Databases (AZD)

Expanding your shipping operations to new locations is made easy with Varsity's AZDs. One-step import of complete rate and routing data for different originating ZIP Codes speeds shipping from new locations.

Certification Level

Varsity is certified by DHL for all rating, manifesting, and labeling functions.
