

ShipSoft™ ZoneBuilder

Key Benefits

- ◆ Cost-effective:
Easily add new shipping locations without added per-site fees
- ◆ Add new locations when you need to without delay
- ◆ Version 2 extends support for more carriers

Software Requirements

- ◆ Applicable Carrier Compliance Kit(s)
- ◆ Applicable Carrier – provided data files

Overview

Expanding your shipping operations to new locations is made easy with Varsity's additional zone databases. These are available to purchase from Varsity on a site-by-site basis. However, for larger organizations with multiple locations, or if your company plans to expand to more than a dozen distribution centers, Varsity offers a more cost-effective option: ShipSoft™ ZoneBuilder.

ZoneBuilder enables you to easily create additional zone databases for as many shipping points as you require.

Key Features

- ◆ Build as many different zone databases as required by your changing business needs, without additional per-site fees.
- ◆ ShipSoft ZoneBuilder now offers the ability to add extended carrier support for additional locations. CCKs supported include UPS, UPS Canada, USPS, FedEx, FedEx Canada, DHL, Purolator, and BAX.
- ◆ Supports adding carrier control records for carriers who provide zone information as part of their customer specific file distributions.
- ◆ Straightforward, two step process: Carrier account numbers related to the new location are entered on a single screen. Location, user access and printer resources by origin are entered on the second screen. The new data is now ready to merge into your data files.

For more information regarding ShipSoft ZoneBuilder, contact Varsity at 800.438.SHIP.
